- ✓ **WORLDWIDE PATENTS PENDING**

*The **Ryan Escape Bar** is a revolutionary designed life-saving entry tool that has been developed to replace all existing entry tools.*

It has sharp, penetrating points attached on each end of the bar that can be driven into the wall at the corner of the window or opening on a 45° angle with only a hard thrust when the **Ryan Escape Bar**® is held in the hand. With a fire retardant rope attached to the bar, it enables a quick escape. The rope is secured in the center by a fixed attachment ring that rotates 360° so that when the weight of the person is on the escape rope, an even distribution of torque is allocated, assuring the rope will not slide, and thus securing the bar in place.

**Booth #4621**

The beauty of The **Ryan Escape Bar**<sup>®</sup> is that no one is left behind, and two or more firefighters can easily escape out of the same opening within seconds of each other.

The **Ryan Escape Bar**<sup>®</sup> would ensure that no one would ever be in danger of burning to death or having to make the decision of jump or die. An opening big enough for a firefighter to get through will enable anyone to escape to the floors below or to the ground safely.

When just one firefighters life is saved by the Ryan Escape Bar the cost of the bar is definitely realized and is most surely worth it! But when one firefighters life is lost because they do not have the Ryan Escape Bar, who in the department bears that cost? The New York City tragedy of 2005 where firefighters jumped to their death will cost New York City millions of dollars! These types of situations can and will happen again!

## **The Ryan Escape Bar**<sup>®</sup> has the capability to stop it!

Let's replace every existing entry tool on every truck and in every rescue vehicle and car, making it absolutely sure that the older bars are never mistakenly taken into a fire again. Let these old bars go out the same way the .38 revolver was retired, replaced with equipment much more capable of doing a much more dependable job. Your people count on you to outfit them in the best way possible, thereby giving them the most promising way to make the rescue and get out alive. The Ryan Escape Bar gives them the best means of escape and rescue when there is no other way.

"It's what firefighters and police should have had available to them since they started going into burning buildings."

"I hope when every Chief is made aware that the Ryan Escape Bar is available, he makes it **STANDARD OPERATING PROCEDURE** that if you go in, the Ryan Escape Bar goes in with you."

The Ryan Escape Bar will become to firefighters what the bullet-proof vest is to Police Officers, "Insurance and a Second Chance." **It will become the tool you run in with and the tool that lets you go home.**

**Price: \$295.00 plus S&H**

**\$345.00 with Rope &  
Carabiner plus S&H**
